01 EXECUTIVE SUMMARY

INVESTMENT OVERVIEW

A Once-in-a-Generation Asset

Resh Council presents an exclusive investment opportunity in one of the most extraordinary mineral deposits ever identified: a 2,328-hectare ophiolitic formation in northern Peru containing 41 strategic metals and rare earth elements, with reserves projected to exceed the combined tonnage of the world's five largest comparable mines.

The deposit is 100% open-pit accessible, located 75 kilometers from the Port of Salaverry on the Pacific coast, and validated by fifteen independent geological and geochemical studies conducted by institutions across four continents. Resh Council holds exclusive rights to represent and deliver this asset to qualified sovereign and institutional counterparts worldwide.

\$ 2.5 B+ Asking Price (USD)	41 Confirmed Elements	2,328 Hectares · 5 Concessions	15 Independent Studies
--	---------------------------------	---	----------------------------------

KEY HIGHLIGHTS

LOCATION	Northern Peru, La Libertad Region. Road-connected to Pan-American Highway. 75km from Port of Salaverry (Pacific).
GEOLOGY	Ophiolitic formation of mantle origin. 20km diameter structure. Minerals disseminated at surface level — 100% open-pit accessibility.
ELEMENTS	41 confirmed: 15 Rare Earth Elements (REE) + 23 Strategic Metals including Rubidium, Neodymium, Dysprosium, Scandium, Gold, Silver.
SCALE	Reserves projected to exceed Mountain Pass (USA), Hoidas Lake (Canada), Nechalacho (Canada), Mount Weld (Australia), and Kvanefjeld (Greenland) — combined.
VALIDATION	15 independent studies (2004–2022): ACTLABS Canada, ALS-Chemex Vancouver, SGS Perú, INETI Portugal, CNEN-CDTN Brasil, UNMSM Perú, J. Ramon y BISA del Perú, others.
EXCLUSIVITY	Resh Council, holds exclusive rights of strategic representation. All engagements Flow exclusively through Resh Council.
ASKING PRICE	USD 2,500,000,000 (Two Billion Five Hundred Million Dollars). Price undisclosed to general market.
STRUCTURE	Full acquisition, Joint Venture with operator, or Raw Material Supply (EXW). Minimum engagement: qualified institutional inquiry.

02 · GEOPOLITICAL CONTEXT

THE GLOBAL MINERALS RACE

The Most Consequential Supply Chain Battle of the 21st Century

Rare earth elements and strategic metals are no longer a niche commodity market. They are the foundational infrastructure of modern civilization: every electric vehicle motor, every wind turbine generator, every advanced military system, and every semiconductor device depends on elements that the world currently sources from a single dominant supplier.

China produces 69% of the world's rare earth elements and controls over 85% of global refining capacity. It leads cobalt processing at 65%, lithium at 55%, and graphite at over 90%. In 2024 alone, China produced 270,000 metric tons of REEs. Its recent export restrictions have created the most acute supply chain vulnerability in modern industrial history.

GLOBAL SUPPLY CHAIN DOMINANCE — CHINA VS. THE WORLD

MINERAL / METRIC	CHINA CONTROL	REST OF WORLD	STRATEGIC RISK
REE Production	69% (270,000 MT)	31%	CRITICAL
REE Refining Capacity	>85%	<15%	CRITICAL
Cobalt Processing	65%	35%	HIGH
Lithium Processing	55%	45%	HIGH
Permanent Magnets (NdFeB)	>90%	<90%	EXTREME

THE US RESPONSE — AND WHY PERU WINS

In April 2026, a US government-backed consortium acquired Serra Verde — a rare earth operation in Goiás, Brazil — for approximately USD 2.8 billion, financed directly by the US Development Finance Corporation (DFC). The transaction was described by analysts as Washington's most decisive move to break China's dominance over the critical minerals supply chain. Serra Verde produces neodymium and praseodymium from a conventional ionic clay deposit. It is, by any measure, a significant asset.

The deposit represented by Resh Council is not comparable to Serra Verde — it surpasses it in every meaningful dimension: elemental diversity (41 vs. 2 primary elements), geological formation type (ophiolitic mantle origin vs. conventional ionic clay), reserve scale (projected to exceed the world's five largest comparable mines combined), and logistical positioning (75km from a Pacific port with direct access to Asian processing hubs).

**ASSET COMPARISON: PERU DEPOSIT VS. SERRA VERDE (BRAZIL)**

METRIC	MINE RARE EARTH — PERU	SERRA VERDE — BRAZIL
Transaction Value	USD 2.5B+ (asking)	USD 2.8B (acquired 2026)
Primary Elements	41 strategic metals & REE	2–3 (Nd, Pr focus)
Geological Formation	Ophiolitic — mantle origin (unique)	Ionic clay (conventional)
Surface Accessibility	100% open-pit	Partial open-pit
Reserve Scale	>5 largest mines combined	Significant, not comparative
Port Distance	75km — Port of Salaverry (Pacific)	300km from Brasilia (inland)
Pacific Access	Direct — Asia in 18–22 days	Atlantic — longer routing
Rubidium	150–479 ppm (globally exceptional)	Not reported
Geopolitical Backing	Peru — US Critical Minerals Ministerial Participant	Brazil — DFC backed
Exclusivity	Resh Council full exclusivity	USA Rare Earth consortium
Studies Completed	15 (2004–2022)	Ongoing

"The Serra Verde acquisition validated the market. This deposit redefines it."

03 · THE DEPOSIT

GEOLOGICAL PROFILE

A Formation Without Geological Peer

The deposit comprises five mining concessions — Atahualpa, Bonanza, Gasñape, Huascar, and Incanato — totaling approximately 2,328 hectares in the La Libertad Region of northern Peru. The geological formation is an intrusive gabbro body emplaced within Upper Jurassic basaltic rocks, situated in a marginal basin along the western edge of the Andes Mountain Range. The structure spans approximately 20 kilometers in diameter.

What distinguishes this deposit from every other known REE formation globally is its ophiolitic origin — rock formed at the earth's mantle boundary and thrust to the surface through tectonic displacement. This genesis produces an elemental diversity and concentration profile that conventional deposit types — ionic clays, carbonatites, veins, dikes — cannot replicate. The minerals are disseminated throughout the surface-level rock mass, not concentrated in deep discontinuous structures, enabling 100% open-pit extraction across the entire concession.

DEPOSIT FAST FACTS

PARAMETER	DATA
Total Area	2,328 hectares across 5 registered concessions
Geological Type	Ophiolitic formation of mantle origin (globally unique for REE)
Structure Diameter	~20 kilometers. Only ~300 hectares formally evaluated to date.
Depth Evaluated	200–300 meters. Formations typically extend 1,000m+.
Mining Method	100% open-pit. Surface-level mineralization across entire site
Road Access	Pan-American Highway connection. All-weather maintained road.
Port Distance	75 km to Port of Salaverry — major Pacific export terminal.
Ownership	100% owned by Peruvian concession holder. Clear title.
Concession Names	Atahualpa · Bonanza · Gasñape · Huascar · Incanato
Studies Conducted	15 national & international (2004–2022)
Diamond Drill Confirmation	LGR-Drill to 180m depth — strategic metals confirmed

04 · ELEMENTAL PROFILE

41 CONFIRMED ELEMENTS

The Full Spectrum of Strategic Value

The deposit contains 41 confirmed elements across two categories: 15 Rare Earth Elements (REE) and 23 additional strategic metals, including Gold and Silver. The concentrations below represent validated ranges from 15 independent studies. Full geochemical datasets, ICP-MS reports, and drill confirmation data are available upon execution of a formal NDA.

PRIORITY ELEMENTS — STRATEGIC & COMMERCIAL VALUE

ELEMENT	SYMBOL	CONCENTRATION (PPM)	STRATEGIC RELEVANCE	GEOPOLITICAL PRIORITY
Rubidium	Rb	150 - 479	Quantum computing, atomic clocks, military GPS	EXTREME
Cerium	Ce*	117 - 150	Catalysts, optical glass, EV batteries	CRITICAL
Lanthanum	La*	67.3 - 79	NiMH batteries, fiber optics, oil refining	CRITICAL
Neodymium	Nd*	42.56	Permanent magnets — EVs, wind turbines, defense	EXTREME
Yttrium	Y*	38 - 78	LEDs, superconductors, cancer treatment	HIGH
Dysprosium	Dy*	6.2	High-temp magnets, EV motors, aerospace	EXTREME
Gadolinium	Gd*	7.5	MRI contrast, nuclear reactors, lasers	CRITICAL
Terbium	Tb*	1.18	Defense sonar, solid-state lighting, lasers	EXTREME
Scandium	Sc*	8.18 - 28	Aerospace alloys, hydrogen fuel cells	CRITICAL
Europium	Eu*	2.0	Display technology, anti-counterfeiting	HIGH
Titanium	Ti	2,000 – 4,000	Aerospace, defense, biomedical	HIGH
Vanadium	V	100 - 283	Grid-scale energy storage, steel	HIGH
Chromium	Cr	100 - 383	Stainless steel, defense alloys	MEDIUM
Cobalt	Co	5 - 90	EV batteries, superalloys	HIGH
Gold	Au	0.13	Monetary reserve, electronics, aerospace	PRESENT
Silver	Ag	1	Electronics, solar panels, medical	PRESENT
Niobium	Nb	42	High-strength steel, superconductors	HIGH
Lithium	Li	21 - 51	EV batteries, grid storage	CRITICAL
Zirconium	Zr	300 - 407	Nuclear reactors, ceramics, aerospace	HIGH

* REE elements confirmed. Note: Rubidium concentrations of 150–479 ppm places this deposit among the highest globally recorded. Full ICP-MS, XRF, and AAS datasets available under NDA.

**05 · RESERVE ANALYSIS & FINANCIAL PROJECTIONS****RESERVE SCALE****Why the Numbers Are Unprecedented**

Only 300 of the 2,328 hectares have been formally evaluated, to a maximum depth of 300 meters. Geological experts assert that ophiolitic formations of this type typically extend to depths of at least 1,000 meters. The evaluated zone represents approximately 13% of the total concession area and less than 30% of the probable vertical extent. All reserve projections below are therefore conservative extrapolations from confirmed sample data.

COMPARATIVE RESERVE SCALE — WORLD'S LARGEST REE MINES

MINE / PROJECT	COUNTRY	PRIMARY ELEMENTS	RESERVE STATUS	VS. PERU DEPOSIT
Mountain Pass (MP Mine)	Usa	Ce, La, Nd, Pr	Active - ~1.8M MT ore/yr	Surpassed
Hoidas Lake	Canadá	La, Ce, Pr, Nd	Development stage	Surpassed
Nechalacho (Avalon)	Canadá	Nd, Pr, Dy, Pr	Development stage	Surpassed
Mount Weld (Lynas)	Australia	La, Ce, Nd, Pr	Active - world's richest	Surpassed
Kvanefjeld (GreenRoc)	Greenland	REE + Uranium	Contested - political risk	Surpassed
Serra Verde (USA RE)	Brasil	Nd, Pr (ionic clay)	Active - USD 2.8B deal 2026	Surpassed
Mine RREE Adriano	Perú	41 elements-Ophiolitic	Available - exclusive rights	Reference

FINANCIAL PROJECTIONS — INDICATIVE MODEL

The following projections are based on industry-standard open-pit REE mining economics, published market prices (Q1 2026), and conservative extraction assumptions applied to the confirmed elemental concentrations across the evaluated 300-hectare zone only. They do not account for the full 2,328 hectares or depths beyond 300 meters. Actual figures are expected to be materially higher upon full resource certification.

METRIC	CONSERVATIVE ESTIMATE	BASE CASE	UPSIDE CASE
Ore Production (Year 1)	500,000 MT/yr	1,000,000 MT/yr	2,000,000 MT/yr
Average REE Grade (TREO)	0.8%	1.0%	1.2%
REE Concentrate Output (Y1)	4,000 MT TREO	10,000 MT TREO	24,000 MT TREO
Blended REE Price (USD/kg)	\$25	\$35	\$50
Gross Revenue Y1 (USD)	\$100M	\$350M	\$1.2B
Rubidium Premium (est.)	+\$15M	+\$40M	+\$90M
EBITDA Margin (industry avg)	35–45%	40–50%	45–55%
EBITDA Year 1 (USD)	\$40–50M	\$156–210M	\$585–715M
CAPEX (est. full build-out)	\$250–350M	\$350–500M	\$500–700M
Payback Period	5–7 years	3–4 years	2–3 years
10-Year NPV (8% discount)	\$800M–\$1.2B	\$2.0B–\$3.5B	\$5B–\$8B+
Asking Price	USD 2,500,000,000	USD 2,500,000,000	USD 2,500,000,000
Price / NPV Ratio	2.08 – 3.13x	0.71 – 1.25x	0.31 – 0.50x

Note: Projections are indicative only. All figures subject to independent feasibility study and formal resource certification. Market prices as of Q1 2026. Full financial model available under NDA upon formal engagement with the company

06 · ENGAGEMENT STRUCTURE

THREE PATHS TO VALUE

Structured for the World's Most Capable Partners

Resh Council has structured three distinct engagement paths to accommodate the full spectrum of qualified institutional interest. Each path is designed to deliver maximum value while maintaining the confidentiality and strategic integrity that an asset of this nature demands.

1	FULL ACQUISITION USD 2,500,000,000+ Outright purchase of all five concessions and associated geological data, studies, and access rights. The buyer acquires 100% control of a globally significant critical minerals asset, with direct influence over global supply chain dynamics. Ideal for: Sovereign wealth funds, national governments, tier-one mining corporations, or strategic industrial acquirers seeking permanent supply security.
2	JOINT VENTURE & OPERATION Negotiated Revenue Share A qualified operator brings capital and extraction capability in exchange for a negotiated revenue share, royalty structure, or equity stake. Resh Council structures and guides the full engagement from first conversation to formal closing. Ideal for: Mid-size mining companies with Pacific Rim access, private equity infrastructure funds, or strategic operators with REE processing capability.
3	RAW MATERIAL SUPPLY (EXW) Offtake Agreement Direct supply of crushed ore and raw mineral output on an Ex Works-basis to qualified processors, refiners, and export intermediaries. The fastest path to commercial revenue without full asset acquisition. Minimum offtake volumes and pricing negotiated directly. Ideal for: Japanese, South Korean, Indian, or European processors seeking to establish non-Chinese supply chains for REE inputs.

PROCESS TIMELINE

PHASE	ACTION	TIMEFRAME
01 — Inquiry	Submit confidential inquiry via Resh Council. Identity and institutional capacity verified.	Immediate
02 — NDA	Execution of mutual NDA. Full geochemical dataset and studies released.	Week 1–2
03 — Due Diligence	Site visit facilitated. Independent technical review by buyer's team	Month 1–2
04 — Term Sheet	Indicative terms proposed. Structure (acquisition / JV / offtake) confirmed.	Month 2–4
05 — Closing	Legal documentation, regulatory filings, transfer of rights or establishment of JV.	Month 4–8

**07 · WHY PERU · RESH COUNCIL****THE COUNTRY****Peru: The Strategic Gateway to South America's Resource Economy**

# 3 Copper Producer Globally	#2 Silver Reserves Globally	#4 Gold Producer Latin America	2026 US Critical Minerals Ministerial
---	---------------------------------------	---	--

Peru's position along the western edge of the Andes — one of the most mineralogically rich mountain chains on earth — produces a geological diversity that few jurisdictions can match. The country holds the world's third-largest copper reserves, second-largest silver deposits, and significant gold, zinc, and lead production. Its Pacific coastline provides direct maritime access to Asian markets — the world's primary processors of rare earth elements.

Peru participated in the 2026 US Critical Minerals Ministerial alongside 53 nations, signaling its centrality to the global realignment of supply chains away from single-source dependency. The country's mining legal framework, while requiring standard regulatory compliance, is well-established and internationally recognized. Foreign investment in mining concessions is protected under bilateral investment treaties with over 30 nations.

THE FIRM**Resh Council - Forging the Alliances That Shape Nations**

Resh Council, (Reg. 20613114425) mandate is a sovereign-grade strategic advisory firm headquartered in Miraflores, Lima, Peru. The firm was built on a single conviction: that Peru's greatest assets deserve the world's most capable partners. The firm identifies, structures, and delivers Peru's most consequential opportunities to the sovereign institutions, governments, and global capital vehicles positioned to shape what comes next.

Resh Council, operates across four strategic sectors: Mining & Critical Minerals, Energy (LNG, renewables, hydrocarbons), Telecommunications (trans-Pacific infrastructure), and Agriculture (Andean superfoods, premium export crops). The firm's advisory framework meets the standards expected by sovereign wealth funds, development finance institutions, and tier-one global capital — OECD-aligned, ESG-compatible, and built for long-term strategic value.

DISCLAIMER: This Investment Memorandum has been prepared by Resh Council EIRL exclusively for informational purposes and is directed solely at qualified institutional investors, sovereign funds, and accredited entities with the legal capacity and financial means to engage in transactions of this nature. This document does not constitute a public offering, a solicitation of investment, or financial advice under any applicable regulatory framework. All financial projections are indicative and based on publicly available market data and industry benchmarks; they do not represent guaranteed returns.
